Games in Education

- Games can benefit many learning styles with the use of visual and auditory stimuli, while encouraging group discussion and participation
- An educational game is an activity presided over by precise rules that involve varying degrees of chance in which players compete through the use of knowledge or skill in attempts to reach specified goals (Peddle, 2011)

Bocor, L. (2013). Active-learning strategies: the use of a game to reinforce learning in nursing education. A case study, Nurse Education in Practice.

Games for learning not just for fun

- Must be:
 - Immersive
 - Have clear goals
 - Can adapt to the individual player
 - Require frequent important decisions
 - Involve a social network
- Require frequent important decisions
